Competency-based Training Programs for NRRC's Assessors and Inspectors

The NRRC has developed a competency-based training initiative, the NRRC-CBTP, to enhance the skills of its assessors and inspectors, enabling them to effectively carry out the legal mandates outlined by the Commission's laws. The primary objective of this initiative is to cultivate a robust cadre of knowledgeable and capable assessors and inspectors. Through a structured sequence of training modules, participants are equipped with the necessary competencies for executing the NRRC's regulatory functions, which include inspection, review and assessment, as well as enforcement duties.

NRRC-CBTP

Briefing Prior Mock Inspection at the Authorized Facility

Briefing Prior Sampling as part of Inspection at the Authorized Facility

The program is comprehensive, encompassing legal, technical, and practical instruction to provide assessors and inspectors with the necessary knowledge, skills, and attitudes to meet their regulatory responsibilities. To ensure proficiency, each participant is required to progress through three levels of formal training—beginner, intermediate, and advanced—and also to engage in hands-on learning, which includes site visits, workshops, case studies, and exchanges with other regulatory authorities. Only upon fulfilling all these requirements is an assessor or inspector authorized to undertake their regulatory responsibilities.

As part of the program, participants engage in mock inspection scenarios and actual sampling procedures at authorized facilities, further solidifying their practical experience and readiness to perform their roles effectively.
